

OVEN AND HOB CLEANER

Product description

Oven & Hob Cleaner utilises a powerful, low risk, non-volatile, environmentally friendly organic solvent to effectively remove greasy deposits and burnt on residues from cooker hobs, hoods, ovens and kitchen surfaces

Core benefits

- Provides a quick and low hazard cleaning response
- Does not put the user at unnecessary risk, can be used safely in confined and enclosed areas
- Low odour and volatility - "non caustic" formulation
- Utilises innovative, low toxicity, environmentally friendly organic solvent derived from a plant by-product stream thus avoiding the disposal burden of spent chemical waste on the environment
- Suitable replacement for more traditional volatile and hazardous aliphatic and aromatic hydrocarbon solvents
- Safe to use on most surfaces including stainless steel, tiles and ceramic when used as directed
- Easily removes greasy residues and burnt on deposits
- Cost effective - ready to use, concentrated formulation

How does it work?

Oven & Hob Cleaner works as a result of its excellent ability to lower surface tension, penetrate soils, boost solvency, couple hydrophobic greases and oils: effectively emulsifying and lifting them free from surfaces. Oven & Hob Cleaner allows soils and burnt residues to be quickly and easily wiped or scoured and rinsed away, enabling complete removal from surfaces.

OVEN AND HOB CLEANER

Directions for use

General Directions

Test on a small non-critical area first. The product is a contact cleaner, requiring a period of contact with the soil, after which the grease and deposits can be easily wiped. Spray neat product liberally over the affected area. Allow a minimum contact time of at least 60 seconds and agitate the surface with a hard brush, scourer pad or cloth. Wipe surface clean with a damp cloth.

Product specification

Contains: Organic solvents, wetting and cleaning agents

Pack Size

750 ml 5 L
